

RAPID RESPONSE TEAM

Rope Access

Scaffold builds require many workers handling the same pieces, passing them back and forth; before the end user climbs the system, a section of scaffold may have been contaminated dozens of times.

Our rope access crews require only a few individuals who can rig and execute the work while providing our own safety and rescue personnel and procedures.

IRISNDT can mobilize and stage multi-disciplined crews, capable of providing mechanical and inspection services, on ropes or on the ground. The result is much fewer personnel required to perform a multitude of tasks all while adhering to current heightened safety protocols.

In the last 2 years, IRISNDT has achieved over 40,000 incident free man-hours completing NDT, Electrical, Pipefitting and Insulation projects while wearing full HF ACID suits on ropes. We would propose completing tasks in Tyvek coveralls with full face P100 respirators when required.

Multi Ticketed Trades On and Off Ropes

Our Journeyman Trades can perform work at a reduced rate when not required on ropes.

Our goal is to provide specialized teams, reduce on-site required Personnel and limit potential exposure to all. We can offer the following:

- Inspection Services (NDT and Advanced)
- Electrical: All Electrical services including: Installations, Cable Tray and Conduit Installation, Cable pulls, Fiber Optics, Heat Trace, Instrumentation, Terminations, Lighting and more.
- Mechanical: Bolting, Blinding, Structural Repairs, Pipe Installation and Removal, Spring Hanger Repairs and Pipe Shoe Adjustment.
- Fabric Maintenance: Insulation Work, Sheet Metal and Jacketing, Banding, Siding Installation, Storm Damage Repair, Surface Preparation, Painting & industrial Cleaning and Welding.
